Advancing Diplomacy

Connecting to People

At the United States Diplomacy Center, changing exhibits and special events will provide an opportunity for America's embassy partners from other nations to highlight their art, history and culture. Such intercultural exchanges give voice to the creative energies and universal values that bond people to each other.

Connecting to the Future

Building diplomacy means building relationships between people and nations. One of the most effective means of advancing mutual understanding is through educational and cultural exchanges. By advancing programs that encourage learning and friendship, the U.S. Diplomacy Center is committed to preparing the next generation for tomorrow's challenges.

Using modern technology, the U.S. Diplomacy Center will help students build friendships and engage their counterparts in distant places by participating in interactive programs, shared projects and on-line discussions about common concerns such as terrorism, the environment and global poverty.

Conferences, educational programs and cultural exchanges at the U.S. Diplomacy Center will bring students, scholars and practitioners together to discuss issues and prepare future leaders for tomorrow's diplomatic challenges.
